

GTM Strategy Assignment - Wispr India

GTM Engineering: Voice Note Hack

Rutuja Rochkari

01 — Day 1 / Week 1 / Month 1

Launch plan

DAY 1

Launch

- Test MVP internally with the team
- Create links and QR codes for distribution
- Soft launch to 20 personal network contacts (friends, founders, startup operators)
- Ask them to forward any voice notes to the bot and check if it works
- Only check the functionality and no other metrics today
- If possible, collect feedback

WEEK 1

Expand

- Collect feedback on what failed, what worked really well and what needs improvement
- Fix obvious bugs from Day 1
- Expand to 50-100 users via
- WhatsApp status updates
- Posts in relevant WhatsApp groups (startup founders, GrowthX community, etc.)
- Soft launch on X/Reddit/Grapevine

MONTH 1

Scale

- Hit 500-1K users through word-of-mouth and organic social media posts
- Track DAU, voice notes transcribed, and retention (do people come back?)
- Identify power users (10+ voice notes/day) and talk to them
- Engage: Reply to mentions of "voice note frustration" on X/Reddit/Grapevine app

How to get the first 100 users

Personal network

DM 20–30 people we know personally. Ask them to try the bot and forward any voice notes.

Community seeding

Slack/Discord groups, startup WhatsApp groups, Reddit (r/bangalore, r/developersIndia), and X with a demo post. Go aggressive on X.

Offline activations

QR codes at Coworking spaces, plus cafes like Third Wave and Blue Tokai, where people usually work out of

Direct outreach

Find 10 B2B sales reps on LinkedIn. Ask top early users to share in their company groups.

Start with people we know. Expand to communities.

Timeline: 7–10 days.

01

Footer link

Every transcription ends with 'Transcribed by [Bot Name]. Save time on voice notes: wa.me/[number]'. Low friction - users share it just by forwarding.

02

Automated share prompt

After 10 transcriptions, the bot messages: 'You've saved 20 minutes. Share this with someone who'd benefit?' Triggered automatically, no manual effort.

03

WhatsApp Status nudge

After 3 uses, prompt with a pre-written status: 'I just found a bot that transcribes voice notes instantly: [link]'. One tap to post, zero copy effort.

04

Power user outreach

Identify top 10 users by transcription count. DM with an offer: early premium access for 5 referrals. Track manually/use tools once this scales

04 — Distribution channels by speed

05 — What could go wrong (and how to fix it)

Product accuracy

Start English-only, add Hinglish in v2. Set expectations with a beta label.

Code-switching fails

Monitor feedback. If 30%+ complain about Hinglish, fast-track v2 support. Set expectations upfront.

Privacy concerns

"We don't store audio. Transcription is instant and deleted." Clear messaging everywhere.

WhatsApp blocks the number

Use WhatsApp Business API from Day 1. Rate-limit usage to avoid spam flags.

Users drop off

Weekly digest — "You saved X minutes this week. Here's what you transcribed."

No viral spread

Footer link in every transcription, status templates, and manual power user referral incentives.

06 — Success metrics

North star metric: daily voice notes transcribed (shows actual usage, not just downloads)

WEEK 1

Early traction
100 users, 20% daily active usage, 3+ voice notes per active user

100

MONTH 1

Viral loop kicks in
1,000 users, viral coefficient >1.2, 30% 7-day retention

1K

MONTH 3

Scale and monetize
10,000 users, viral coefficient >1.5, 40% 30-day retention, identify top 3 use cases (sales teams, founders, parents) and build features for them-identify monetization path

10K
